

# Aquatic Catalytic Granular Activated Carbon System

## What:

A simple system to treat makeup water for pools and spas with Catalytic Granular Activated Carbon (CGAC) to remove combined chlorine from makeup water.

## How:

CGAC has catalytic sites that quickly transform combined chlorine molecules into chloride ions and nitrogen gas.

## Where:

The Aquatic Catalytic Carbon System includes:

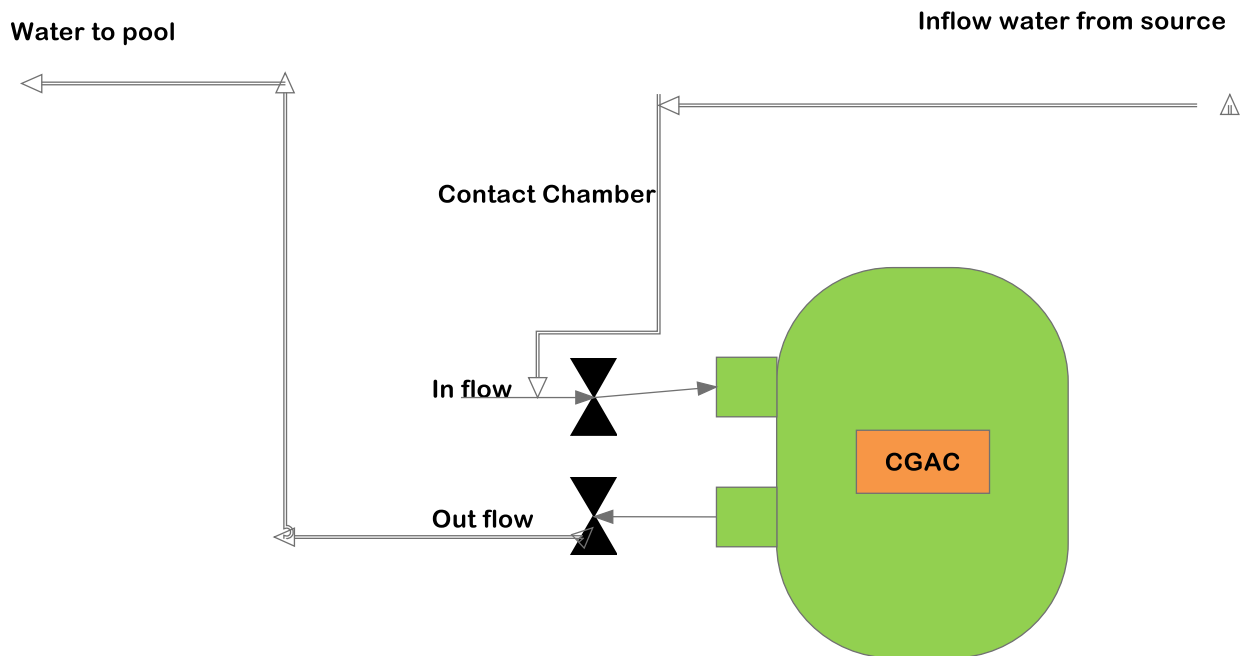

- CGAC in a fine mesh bag
- Flotation spheres
- Small strip of PoolMoss® Pro
- Submersible or offline contact chamber

For pools with surge/balance tanks, the submersible contact chamber can be placed in front of the inflow water source.

For pools and spas without surge/balance tanks, an offline patent-pending contact chamber is installed on the inflow water pipe.
