

Nature Had the Idea First

We believe that naturally pure, healthy water is a fundamental right. We are committed to bringing pure, healthy water for drinking, recreation and industry, in sustainable, innovative ways. Join us.

Sphagnum Moss

The Sphagnum moss used in our products is a natural, green plant that grows in bogs. It is harvested by hand, in a sustainable manner, can be re-harvested in 5-7 years, is processed, sterilized and packaged.

The use of PoolMoss® Pro:

- Reduces disinfection by-products and that “pool” smell
- Reduces organic contamination on all pool and filter surfaces
- Reduces heat, energy, water, and utility waste
- Reduces scaling and corrosion

So you can:

- Use fewer chemicals, less often
- Balances pool and spa water chemistry using less chemicals, less often
- Stabilizes pH and alkalinity using less chemicals
- Pool and spa care and maintenance are easier and less time consuming

Providing
naturally pure,
healthier water.

In our systems, Sphagnum moss work much like a tea bag. The moss is placed inside a contact chamber, which allows it to interact and treat the pool/spa water. Once treated, the moss-conditioned water helps water treatment chemicals work more efficiently.

Contact chambers – for in line or surge tank application

Why do faciity managers, operators and employess want to use PoolMoss® Pro?

- With water and air that feels and smells as great as it looks, swimmers truly enjoy swimming again and you are the hero for providing it!
- Chemicals work more efficiently, which means less need to be purchased, used, stored and handled.
- Saves water by allowing filters to work more efficiently which results in heating, energy, chemical, and water savings – imporving the bottom line for your whole organization.
- Scale and corrosion are dramatically reduced because PoolMoss® Pro reduces organic contamination and decreases its ongoing formation – you are treating the source of problems in your pool or spa, not just the symptoms.
