

PoolMoss[®] and Salt Generators

Nature Had the Idea First

The first all-natural and sustainable plant based water treatment solution for today's water issues. Our products harness the natural properties of Sphagnum moss to improve water quality and affect every surface touched by water.

Sphagnum Moss

The Sphagnum moss used in our products is a natural, green plant that grows in bogs. It is harvested by hand, in a sustainable manner, can be re-harvested in 5-7 years, is processed, sterilized and packaged.

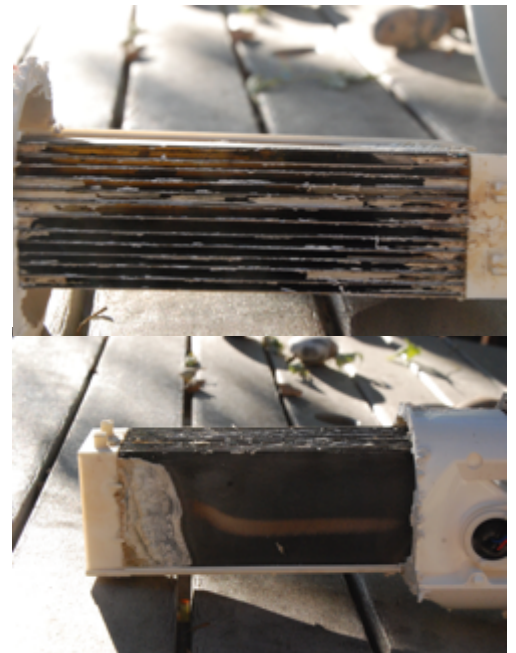

Hypochlorous acid "salt" generators and PoolMoss[®] were made for each other. Depending on the chemical composition of the local water, a lot of scale can accumulate between the plates, requiring acid washing or costly replacement.

As one satisfied customer in Minnesota reported, "I open my pool, turn on the generator, fill the contact chamber with PoolNaturally[®] and enjoy the pool all summer long. Last year, I didn't have to add anything to the pool except some water."

Salt Generator after 1-2 years without PoolMoss[®]

Salt Generator after 7 years with PoolMoss[®]

- Decrease organic contamination
- Decrease corrosion
- Control pH
- Save energy
- Reduce maintenance
- Reduce costs

Feel the difference.

See the difference.

KEY RESULTS

- Improved Water Quality
- Improved Air Quality
- Stabilized pH and Alkalinity
- Reduced Scale and Staining
- Reduced Corrosion

KEY BENEFITS

- Reduced Chemical Usage
- Reduced Water Usage
- Reduced Energy Usage
- Reduced Maintenance
