

PoolMoss[®] Pro for Ponds

Nature Had the Idea First

We believe that naturally pure, healthy water is a fundamental right. We are committed to bringing pure, healthy water for drinking, recreation and industry, in sustainable, innovative ways. Join us.

Sphagnum Moss

The Sphagnum moss used in our products is a natural, green plant that grows in bogs. It is harvested by hand, in a sustainable manner, can be re-harvested in 5-7 years, is processed, sterilized and packaged.

PoolMoss[®] Pro brings the natural water treatment power of Sphagnum moss to commercial ponds.

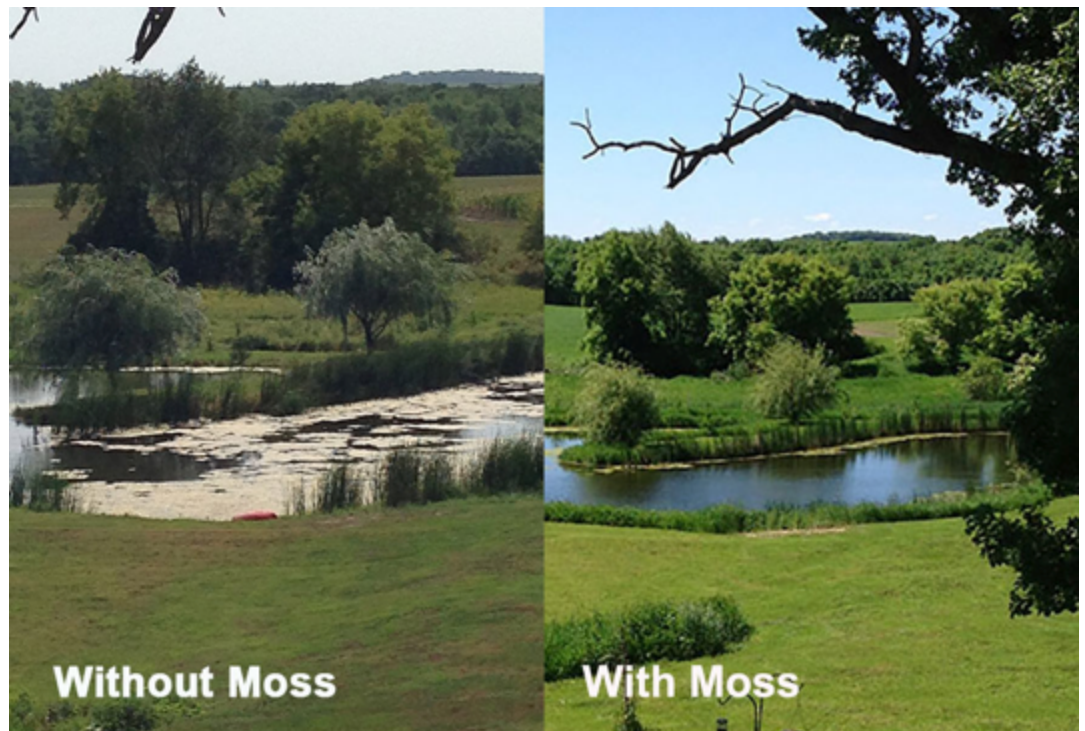

PoolMoss[®] Pro:

- clarifies water
- inhibits accumulation of organic contamination
- stabilizes pH
- creates clear, beautiful, better smelling water

The time, cost, and effort associated with maintenance and service issues are minimized. The dose of PoolMoss[®] Pro is determined by pond size and the water flow. The appropriate delivery system depends on the water flow and the flow dynamics in the pond.

Once installed, the PoolMoss[®] Pro is changed monthly.

Same pond in central Minnesota

Providing
naturally pure,
healthier water.

Contact Chambers

Each contact chamber will create a unique interaction with the PoolMoss® Pro and the water within the chamber. The effects of an actual bog are replicated within the chambers, and efficiently delivered throughout the system.

KEY RESULTS

- Totally Natural Water Treatment
- Enhances Water Clarity
- Reduces Pond Odors
- Supports Natural Flora and Fauna
- Esthetically Pleasing
- Reduced Scale and Staining

KEY BENEFITS

- Green and Sustainable
- Reduces Chemical Usage
- Reduces Maintenance
