

Moss Briefs:

Before and After ProMoss™

System History:

BAC Cross Flow Cooling Tower located in downtown Clearwater. System was without treatment for 2-3 years. System is made up with soft water. The last known treatment service was zero bleed. System must have had interruptions in softener service as tower fill is loaded with calcium carbonate scale.

Our First Hand Experience with ProMoss™

- Observed calcium carbonate scale begin to detach from tower fill within 2 weeks after ProMoss™ addition.
- Observed removal organic contamination
- Continued to vacuum out scale debris from tower basin every 2 weeks

Key Benefits of ProMoss™

- reduces organic contamination
- reduces corrosion
- reduces water usage
- reduces chemical usage
- removes and reduces scale
- stabilizes pH and alkalinity
- reduces energy usage
- reduces maintenance

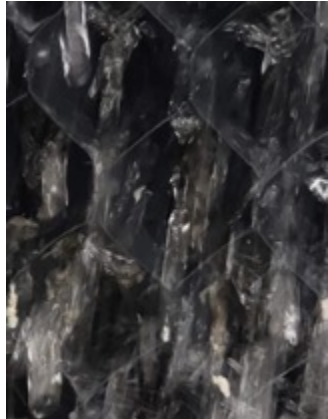

Before ProMoss™

After 1 month of ProMoss™

Before ProMoss™

After 1 month of ProMoss™

Providing naturally pure, healthier water.

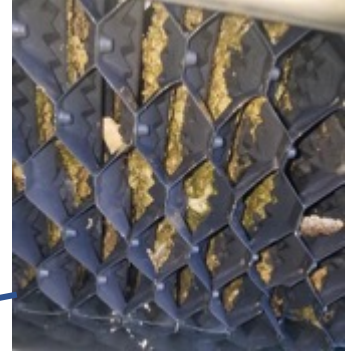

Added ProMoss™ 3 to system. Went back 2 weeks later and vacuumed out tower basin. Went back after another 2 weeks, vacuumed out basin once again and changed out ProMoss™ 3.

After 2

Picture was taken during evaluation when system was off line

After 4 weeks

After 6 weeks

2 months after starting ProMoss™
