

## Creative Water Solutions: **Partnering for Sustainable ESG Achievement**

Creative Water Solutions' ProMoss™ product offers several environmental benefits that can help companies achieve their Environmental, Social, and Governance (ESG) targets:

Call for More Information

**1-877-212-6493**

**01**

### **Sustainable Sphagnum Moss**

ProMoss uses Sphagnum moss, a natural and renewable plant that is harvested sustainably. The harvesting process ensures no damage is done to the bog, and allows the moss can regrow, making it an eco-friendly choice.

**02**

### **Reduced Water Usage**

ProMoss has been proven to reduce water usage by 10-15% in multiple case studies. Unlike chemical treatments, it doesn't add dissolved solids to the water, allowing for extended water cycling before discharge.

**03**

### **Lower Energy Consumption**

Using ProMoss leads to cleaner systems, improving heat transfer efficiency and reducing the energy required for cooling. Additionally, it eliminates the need for additional chemical pumps, further saving energy.

**04**

### **Environmental Preservation**

By avoiding the use of chemical additives and reducing the production of chemicals, ProMoss helps preserve natural resources and reduces energy consumption associated with chemical production.

**05**

### **Elimination of Chemical Drums**

ProMoss eliminates the need for chemical drums, which require energy and resources, such as plastic, to produce. This reduces the environmental impact of packaging waste.

**06**

### **Safe Disposal**

ProMoss can be safely disposed of, minimizing the environmental impact compared to chemical treatments that may require specialized disposal.

**07**

### **Reduction in Transportation Emissions**

ProMoss eliminates the need for third-party deliveries of chemicals, which often involve significant gas consumption for transportation, contributing to reducing carbon emissions.

**08**

### **Water Reuse**

In certain applications, using ProMoss instead of chemicals enables the effluent water to be safely used in numerous non-potable water applications.

By incorporating ProMoss into their water treatment systems, companies can enhance their environmental performance, reduce resource consumption, and contribute to their ESG goals by promoting sustainability and responsible water management practices.

**Let's discuss how Creative Water can help you achieve your ESG targets while creating a cleaner, more sustainable world—Creative Water Solutions - making ESG a Reality.**
